Genomic Sciences Center and Genome Science Laboratory in RIKEN.
Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5' AGGAGAGAGAAGARCTOTTTTTTTTTTTTTVN 3', CDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 5.0 and subtraction to of sequence [5' Second strand cDNA was prepared with the primer adapter of sequence [5' Cond Strand CDNA was prepared with the primer adapter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /codon_start=1

NotI: The infant brain library, constructed by Bento
Soares, Columbia University, was oligo-(dT) primed and
directionally cloned into an MI3-derived plasmid using
total brain mRNA from a 72-day old human female afflicted
with spinal muscular arrophy.

                                                                                                                                                                                                                                                                                                                                                           The present invention relates to phosphatase polypeptides, nucleotide sequences encoding them, as well as various products and methods useful for the diagnosis and treatment of various phosphatase-related diseases and conditions. Substance that modulates the activity of phosphatase and conditions. Substance that modulates the activity of phosphatase cardiovascular disease, brain or neuronal-associated diseases and metabolic disorders, including cancers of tissues, cancers of haematopoietic origin, diseases of central and peripheral nervous system, Alzheimer's disease, Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, viral infections, infections caused by prions, bacteria and fungi, ocular diseases, diabetes, migraines, prions, bacteria and disorders, attention disorders, conition disorders, hypotension, hypertension, psychotic disorders, neurological disorders, dyskinesias and organ transplant rejection. The present sequence is a DNA encoding human SGP003 phosphatase (DSP) and MAP CHIDIO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ij

                                                                                                                                                                                                                                                                                                                                                                                        The present sequence encodes a human regulator of intracellular phosphorylatuon (HRIP). HRIP is useful for screening agonists and artagonists of HRIP polypeptide. HRIP and its agonist or antagonists of are useful for treating a disease or condition associated with decreased or increased expression of functional HRIP. Diseases treated or diagnosed include neurological disorders such as stroke, parkinson's disease, demyelinating diseases, bacterial and viral meningitis and other developmental disorders of the central nervous system. Only the disorders of the central nervous system. Only as actinic Meratosis, arteriosclerosis, atherosclerosis and cancer of including leukaemia, melanoma, myeloma and cancer of the adrenal gland, bladder, bone, bone marrow, liver, lung, muscle, ovary, autoimmune/ inflammatory disorder such as Addison's disease, acquired immunodeficiency diseases, allergies, bronchitis, diabetes mellitus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        4

The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                Probe #22910 used to measure gene expression in human placenta sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ctgcagaaaggagaaaatcccttggctctaaaatgacatctggagaagtgaagacaag 145

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            553 recerecercagerececerectaaceecareerecreerrerearaaceaecreeae 494

Sudarsanam S,

The present invention relates to phosphatase polypeptides, nucleotide sequences encoding them, as well as various products and methods useful for the diagnosis and treatment of various phosphatase-related diseases and conditions. Substance that modulates the activity of phosphatase polypeptide is used to treat immune-related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases and metabolic disorders, including cancers of tissues, cancers of haematopoletic origin, diseases of central and peripheral nervous system, Alzheimer's disease, Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, viral infections, infections caused by prions, bacteria and fungi, ocular diseases, diabetes, migraines, pain, sexual dysfunction, mood disorders, attention disorders, neurological disorders, hypotension, hypertension, psychotic disorders, neurological disorders, dyskinesias and organ transplant rejection. The present sequence is a DNA encoding human SCP060 phosphatase (DSP) and MAP and MAPP SCP060 gene maps to chromosomal position

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral nervopathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic thateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  651 gocaagaaccgctgcgtcctcccgaaccgggctttttgaagcagctccgggagctggac 710

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel genes (AAI62752-AAI62961) and proteins (AAMA2347-AAAA415) useful for preventing, treating or ameliaring medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel plasma membrane associated proteins useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancer, immune response and neuronal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; SEQ ID NO 19; 532pp + Sequence Listing; English

This invention relates to an isolated dual specificity phosphatase-9 (DSP-9) and its variant. The DSP-9 protein has the ability to dephosphorylate an activated mitogen activated protein (MAP) kinase. Included in the invention are an expression vector comprising a polynucleotide encoding the DSP-9 protein, a host cell transformed by the expression vector, and an antibody that specifically binds to DSP-9. DSP-9 has cytostatic; immunosuppressive; antiallergic; and antiproliferative activity. DSP-9 modulating agents are useful for modulating a proliferative response, differentiation or survival of a cell which displays contexting inhibition of cell growth, anchorage independent growth or an altered intercellular adhesion property, in a patient. DSP-9 agonists and antagonists are also useful for treating a disorder associated with DSP-9 activity such as Duchenne muscular dystrophy, cancer, graft-versus-host disease, autoimmune disease, albormal cell growth, abnormal cell proliferation and cell cycle abnormalities. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1;

Substance that modulates the activity of phosphatase polypeptide is used to treat immune-related diseases and disorders,

cardiovascular disease, brain or neuronal-associated diseases and metabolic disorders, including cancers of tissues, cancers of haematopoietic origin, diseases of central and peripheral nervous system, Alzheimer's disease, Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, viral infections, infections caused by prions, bacteria and fungi, ocular diseases, diabetes, migraines, pain, sexual dysfunction, mood disorders, attention disorders, cognition disorders, hypotension, hypertension, psychotic disorders, neurological disorders, dyskinesias and organ transplant rejection. The present sequence is a DNA encoding human SCPO14 phosphatase polypeptide. This sequence is classified as dual specificity phosphatase (DSP) and MAP kinase phosphatase (MKP). The present invention relates to phosphatase proteins and coding. Sequences. The present sequence is one such phosphatase coding sequence. Phosphatases are enzymes that catalyse the dephosphortation of proteins modified by phosphorylation of serine, threonine or tyrosine residues. The phosphatases are useful for treating a variety of diseases: for example cancer e.g. breast, urogenital, prostate, head, neck, lung cancers, synovial sarcomas, renal cell carcinoma, non-small cell lung cancer, hepatocellular carcinoma, pancreatic endocrine tumours, stomach cancer, glioblastoma, colorectal cancer and thyroid cancer, stomach disorders, myopathies, congenital muscle disorders, Papillon-Lefevre syndrome, Cowden disease, ectodermal dysplasia, Moeblus syndrome, blornsted syndrome, Bannayan Zonana syndrome, schizophrenia and
                                                                                                                                                                                                                                                                                                            New protein phosphatase polypeptide for diagnosing and treating phosphatase related disorders such as cancer, schizophrenia, cardiac dysfunction and/or vascular disorders
                                                                                                                                                                                                                            Flanagan P, Lioubin M;

Novel nucleic acids and peptides derived from open reading frame X, neurodegenerative disorders and cardiovascular disease proliferative cancers, e.g for treating

Claim 5; Page 3391-3392; 5507pp; English.

antiinflammatory; antibacterial; antiviral; antifugal; antirheumatic; antiinflammatory; antibacterial; antiviral; antifugal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroldism, cholesterol ester storage, systemic lupus antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive;

New cardiovascular system associated protein tyrosine phosphatases are used in the diagnosis and treatment of e.g. immune disorders, anti-proliferative disorders, metabolic disorders and cardiovascular

disorders

This sequence encodes a cardiovascular system associated protein tyrosine phosphatase 4 (CSAPTP). The CSAPTP nucleic acid and protein molecules are used to modulate requiation of cellular processes. CSAPTP nucleic acid and protein molecules and modulators of CSAPTP activity and card and protein molecules and modulators of CSAPTP activity and expression can be used to treat a subject with a disorder characterized by aberrant CSAPTP expression or activity. These disorder can include an immune disorder, an anti-proliferative disorder, a proliferative disorder e.g. renal and lung carcinomas, a metabolic disorder e.g. disorder e.g. thypertension or coronary heart disease or a disorder rising from improper phosphorylation of a phosphorylated protein. Anti-CSAPTP antibodies are used to isolate CSAPTP by standard techniques, to facilitate the purification of a phosphorylation from cells, to detect CSAPTP protein in cell supernatant for evaluating the level of CSAPTP expression and to monitor protein levels in tissue as procedure. CSAPTP nucleic acids, antibodies and protein molecules can be used in screening assays and in predictive medicine e.g. prognostic assays, monitoring clinical trials and pharmacogenetics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          515
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            498

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence encodes a cardiovascular system associated protein tyrosine phosphatase 4 (CSAPTP). The CSAPTP nucleic acid and protein molecules are used to modulate requiation of cellular processes. CSAPTP nucleic acid and protein molecules and modulators of CSAPTP activity and cache acid and protein molecules and modulators of CSAPTP activity and cache acid and the season can be used to treat a subject with a disorder characterized by aberrant CSAPTP expression or activity. These disorder characterized an immune disorder, an anti-proliferative disorder, a proliferative disorder e.g. disorder e.g. renal and lung carcinomas, a metabolic disorder e.g. clabetes, viral pathogenesis, a neural disorder, a cardiovascular disorder e.g. hypertension or coronary heart disease or a disorder rising from improper phosphorylation of a phosphorylated protein. Anti-CSAPTP cordinates, to detect CSAPTP protein in cell supernatant for evaluating from cells, to detect CSAPTP protein in cell supernatant for evaluating procedure. CSAPTP protein and to monitor protein levels in tissue as procedure. CSAPTP protein and to monitor protein levels in tissue as procedure. CSAPTP nucleic acids, antibodies and protein molecules can be used in screening assays and in predictive medicine e.g. prognostic measure monitoring of in predictive medicine e.g. prognostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New cardiovascular system associated protein tyrosine phosphatases are used in the diagnosis and treatment of e.g. immune disorders, anti-proliferative disorders, metabolic disorders and cardiovascular

                                                                                                                     AA246138-246168 encode human phosphorylation effectors (PHSP), designated PHSP1-PHSP31 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated with increased PHSP expression/activity.

The present sequence is given in a method relating to the bosphateae Dep-7. The antibody specific to DSP-7 and the antisense polymucleotide of the nucleic acid encoding DSP-7 and the antisense polymucleotide of the nucleic acid encoding DSP-7 are useful for detecting DSP-7 expression in a sample which comprises an RNA or cDNA preparation. The antibody is linked to a support material and a detectable marker and the amount of DSP-7 polymucleotide hybridisation assay. The isolated DSP-7 polymucleotide is determined using PCR or hybridisation hat modulate DSP-7 activity. The identified agents are useful for treating buchenne muscular distribution, cancer, graft-versus-host disease, autoimmune diseases, allergies, metabolic diseases, abnormal cell growth, abnormal cell proliferation and cell cycle abnormalities.
                                                                                                                                                                                                                                                                                                                            Novel dual-specificity mitogen-activated protein kinase phosphatase polypeptide used in assays to identify agents that modulate the enzyme's activity, which are useful for treating cancer and autoimmune
